

Aerosport Power IO-375 Engine Sale

This is a new IO-375 B1B engine constructed by Aerosport Power. This is the 195 HP version (lower compression ratio version). It was originally assembled in 2013. The cylinders have had dessicant plugs maintained in them since purchased. I boroscoped the cylinders a few months ago and did not see any rust formation in the cylinders. The crankcase has had a dessicant air blower on it since I got it to keep the rest of the engine dry. Included equipment is the following:

- Skytec starter
- Plane Power alternator
- Airflow Performance Fuel pump
- Meggit oil cooler
- Dual E-Mag ignition
- Silver Hawk Servo
- Baffling installed
- Four pipe exhaust system with heat muffler shroud

Engine is currently attached to an airframe but will be removed soon. The engine originally came with a prop governor but will be removed and blanked off. The crankshaft has a bolt in it that will need to be removed for fixed pitch operation.

This engine currently sells around \$67,000 (depending on options) and has a 6-8 month lead time for comparison.

Asking \$50,000, located in Hillsboro. Contact me at (801) 652-6098 – David Kissick
